NONFICTION / DEVELOPMENTAL SCIENCE / PARENTING

A Natural-History Atlas of the First 1,000 Days

Parenthood: The Atlas is a longitudinal evidence atlas of developmental science from roughly one year before conception through age three. It distinguishes three non-collapsible domains: what science can observe, what interpretation suggests, and what the relational art of caregiving demands.

Rather than prescriptive parenting manuals or single-study alarmism, this work presents a systematic natural-history map across fifteen curated developmental milestones. Every claim is calibrated to verified empirical certainty grades under the Open Knowledge Format.

From the placental filtration of maternal cortisol to the emergence of communicative turns, from neonatal transition physiology to the fragile mechanics of toddler self-regulation, The Atlas offers parents and practitioners an unpadded, evidence-anchored foundation.

KEY EPISTEMIC ATTRIBUTES:

- 15 curated developmental chapters from preconception through age three.
- Calibrated claim verbs strictly matching underlying evidence certainty grades.
- Systematic genetically informed (GI) confounding audits across all 72 cards.
- Governed by Open Knowledge Format (OKF v0.2) and verified DOIs.
